#### 1 Description

The RedRock® RR122-1B92-511/512 and RR122-1B93-511/512 are digital magnetic sensors ideal for use in medical, industrial, automotive, and consumer applications. They are based on patented Tunneling Magnetoresistance (TMR) technology with seamless CMOS integration.

The RR122-1B92-511/512 and RR122-1B93-511/512 feature an operate sensitivity of 30 G (3.0 mT), with an omnipolar magnetic field response. They offer a wide supply voltage range from 1.7 up to 5.5 V, ideal for applications ranging from small battery-powered electronics to industrial machinery. They have extremely low average current drain (32  $\mu$ A) for an active magnetic sensor operating at 10 kHz and high operating temperature range from -40°C up to +125°C.

#### 2 Features

- ▶ Operate sensitivity of 30 G
- ► Lowest Average Current < 32 µA
- ▶ Wide Supply Voltage range of 1.7V 5.5V
- ► Omnipolar Push-Pull Response
- ▶ Operating Frequency of 10 kHz
- ► Temperature Rated up to 125°C
- ► RoHS & REACH Compliant

### 3 Applications

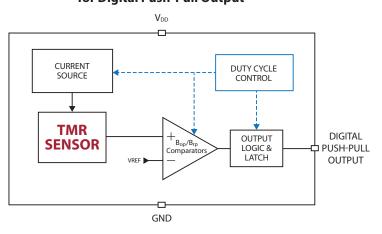

- ▶ Proximity Detection
- ► Rotary Sensing
- ▶ Fluid Level Detection
- ▶ Door & Lid Closure Detection
- ► Utility Meters
- ► Motor Controllers
- ► Consumer Electronics

#### Notes:

- 1. Exceeding Absolute Ratings may cause permanent damage to the device.
- 2. Unless otherwise specified, all characteristics are measured at 25°C.
- 3. Unless otherwise specified,  $V_{DD} = 1.7 \text{ V}$  to 5.5 V,  $T_A = -40 ^{\circ}\text{C}$  to  $+85 ^{\circ}\text{C}$  (1892),  $-40 ^{\circ}\text{C}$  to  $+125 ^{\circ}\text{C}$  (1893). Typical values are  $V_{DD} = 3.0 \text{ V}$  and  $T_A = +25 ^{\circ}\text{C}$ .

ESD Note: This product uses semiconductors that can be damaged by electrostatic discharge (ESD). When handling, proper ESD precautions should be taken to avoid performance degradation or loss of functionality. Damage due to inappropriate handling is not covered under warranty.

#### 5.1 Axis of Sensitivity

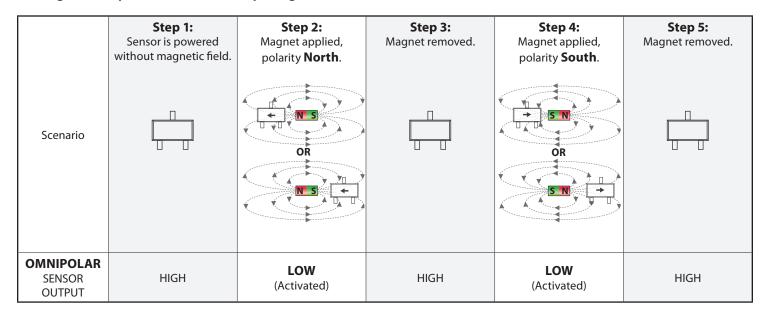

**Note:** The most straightforward way of aligning a magnet with a TMR sensor is by lining up the magnet's magnetization axis with the sensor's Axis of Sensitivity (as shown above). However, there are many other alignments and orientations that will also achieve proper operation. For any questions, or to learn more, please contact Coto Technology.

# **6 Application Information**

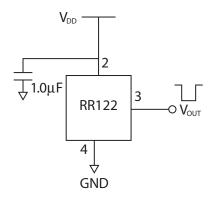

## **RR122 Push-Pull Output Application Circuit**

The output voltage on the RR122 is active low, meaning that while a sufficiently strong magnetic field is present, the output voltage is low. The output voltage can be connected to a digital input pin on a microcontroller. A decoupling capacitor between the supply voltage and ground is required with placement close to the magnetic sensor. A capacitor with a value of 1  $\mu$ F, placed not more than 10 mm from the sensor, is required.

### 10 Suggested Pb-Free Reflow Profile

#### Notes:

- 1. Fully compatible with standard no-lead solder profile, 260°C for 30 seconds max (3 cycles max).
- 2. Profile shown as example. Users are advised to develop their own board-level profile.
- 3. Suggested Pb-free reflow profile derived from IPC/JEDEC J-STD-020E.
- 4. Temperature tolerance: +0°C, as measured at any point on the package or leads
- 5. MSL rating of 1 (SOT-23-3 only) compatible with J-STD-020 or equivalent.
- 6. MSL rating of 3 (LGA-4 and Leaded LGA-4) compatible with J-STD-020 or equivalent.
- 7. All temperatures refer to the center of the package, measured on the package body surface that is facing up during assembly reflow (e.g., livebug). If parts are reflowed in other than the normal live bug assembly reflow orientation (i.e., dead-bug), Tp shall be within ± 2°C of the live bug Tp and still meet the Tc requirements, otherwise, the profile shall be adjusted to achieve the latter. To accurately measure actual peak package body temperatures, refer to JEP140 for recommended thermocouple use.
- 8. Reflow profiles in this document are for classification/preconditioning and are not meant to specify board assembly profiles. Actual board assembly profiles should be developed based on specific process needs and board designs and should not exceed the parameters in this table.
